## Revolutionary Technology - 聖Hijiri Cable

SMT 「匠 TAKUMI」

SM2R-L 「SOUND MATTER」

X-DCH 「和 NAGOMI」

HGP 「極 KIWAMI」

HCS

HCI-XLR

H-SLC 「導 MICHU」

HDG RCA-AES 「Million」

The cables in the audio system are very similar to the human arteries in the body. If there are problems with the arteries, the whole body is affected.

The same goes for audio system cables.

聖Hijiri is designed with resonance control technology and the cable tuning is groundbreaking and an excellent technology that we are very proud of and no other cable company can do it.

聖Hijiri has astonishing conductivity characteristics, with a resistance value of 0.0001% and an electromagnetic wave diffusion rate of 0.98-0.99 and these volume is almost Zero.

If the power cord, signal cable, and speaker cord is distorted, the consonants will become muddy and the "sa" will become "za", and music playback will not be clearly expressed.

In particular, signal cables are very sensitive to the music sound of the playback, also is a very bad effect on the human body.

聖Hijiri cable produces natural, full of vitality, and reproduces realistic music sound.

Many test results that support this fact have been published in audio magazines around the world.

.Customers who have purchased 聖Hijiri cable have praised us, saying, "I am very satisfied with the excellent cable."

聖Hijiri is the only cable in the world.
